

WHAT IS CLAIMED IS:

1. A detachable vaginal mold, comprising:
 - a main body;
 - a minor part; and
 - a jointing design formed between said main body and said minor part for connecting said main body to said minor part.
2. The vaginal mold as claimed in claim 1, wherein said main body is a hollow columnar structure.
3. The vaginal mold as claimed in claim 1, wherein said minor part covers one end of said main body.
4. The vaginal mold as claimed in claim 1, wherein said main body is a porous structure.
5. The vaginal mold as claimed in claim 1, wherein said minor part has an arc surface.
6. The vaginal mold as claimed in claim 1, wherein said minor part is porous.
7. The vaginal mold as claimed in claim 1, wherein said jointing design is one selected from a group consisting of a dentation design, a mortise design, a screw design, a mitre design, a fastener design, and a combination thereof.
8. The vaginal mold as claimed in claim 1, wherein said minor part serves as a front end of said vaginal mold.
9. A detachable columnar-hollow vaginal mold composed of plural petal structures.
10. The detachable columnar-hollow vaginal mold as claimed in claim 9, wherein said plural petal structures are porous.
11. The detachable columnar-hollow vaginal mold as claimed in claim 9, wherein said plural petal structures are connected mutually by a design

selected from a group consisting of a dentation design, a mortise design, a mitre design, a fastener design, and a combination thereof.

12. The detachable columnar-hollow vaginal mold as claimed in claim 9, wherein said detachable columnar-hollow vaginal mold is a one-end opened hollow structure.

13. A detachable columnar-hallow vaginal mold comprised of plural structures, wherein said plural structures are connected mutually by a design selected from a group consisting of a dentation design, a mortise design, a mitre design, a fastener design, and a combination thereof.

14. The detachable columnar-hallow vaginal mold as claimed in claim 13, wherein said plural petal structures are porous.

15 The detachable columnar-hollow vaginal mold as claimed in claim 13, wherein said plural structures are identical structures.

16. The detachable columnar-hollow vaginal mold as claimed in claim 13, wherein said plural structures are different structures.

17. The detachable columnar-hollow vaginal mold as claimed in claim 13, wherein some of said plural structures are different structures and others are identical structures.
